

# Understanding Fraction Computation

by Applying and Extending Previous  
Understandings

Julie McNamara  
NCTM 2014

*Yours is not to reason why  
Just invert and multiply*

# Standards for Mathematical Practice

1. **Make sense** of problems and persevere in solving them.
2. **Reason** abstractly and quantitatively.
3. Construct **viable** arguments and **critique** the reasoning of others.
4. **Model** with mathematics.
5. Use appropriate tools **strategically**.
6. Attend to **precision**.
7. Look for and **make use** of structure.
8. Look for and express regularity in repeated **reasoning**.

# Brendan, Grade 4

1. Without computing the exact answer, decide which of these expressions would produce the answer with the least value and the greatest value.

A. Addition:  $\frac{3}{4} + \frac{5}{8}$

Least Value Division

B. Subtraction:  $\frac{3}{4} - \frac{5}{8}$

C. Multiplication:  $\frac{3}{4} \times \frac{5}{8}$

Greatest Value multiplication

D. Division:  $\frac{3}{4} \div \frac{5}{8}$

Explain your thinking below:

Division because you have to split it up.  
Multiplication because you have to add more than 2 of it.

# Grade 3: Number and Operations - Fractions

Develop understanding of fractions as numbers.

- *Implications for addition/subtraction*
- *Implications for multiplication/division*

# Grade 4: Number and Operations - Fractions

Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.

- *Implications for addition/subtraction*
- *Implications for multiplication*

# Grade 5: Number and Operations - Fractions

Use equivalent fractions as a strategy to add and subtract fractions.

Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

- *Implications for addition/subtraction*
- *Implications for multiplication/division*

# Fractions as numbers...

*“In mathematics, do whatever it takes to help you learn something, provided you do not lose sight of what you are supposed to learn. In the case of fractions, it means you may use any pictorial image you want to process your thoughts on fractions, but at the end, you should be able to formulate logical arguments in terms of the original definition of a fraction as a point on the number line.”*

*-Wu, 2002, p. 13*

# Grade 3: Number and Operations - Fractions

Develop understanding of fractions as numbers.

# Fractions Greater than One

- Placing mixed numbers and fraction equivalents on the number line

**Example:**

# Placing $\frac{1}{2}$ on the number line

# Placing $\frac{1}{2}$ on the number line

View video: “Placing  $\frac{1}{2}$  on the number line”

<https://mathsolutions.wistia.com/projects/r4bjpdzb31>

*Beyond Invert & Multiply (forthcoming)*

# Grade 3: Number and Operations - Fractions

Develop understanding of fractions as numbers.

# Grade 4: Number and Operations - Fractions

3.b: Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation.

# Whole number addition strategies

- Decomposing/recomposing
- Associative property
- Commutative property

# Ways to Make

- How many ways can you make...

1

# Ways to Make

- How many ways can you make...

$$\frac{1}{2}$$

# Ways to Make

- How many ways can you make...

$$\begin{array}{r} 7 \\ \hline 12 \end{array}$$

# Get to the Whole!

- Decomposing and recomposing fractions to “get to the whole” when adding and subtracting.

$$\frac{3}{4} + \frac{3}{4}$$

# Get to the Whole!

View Video:

“Three-fourths plus three-fourths: Will’s strategy”

<https://mathsolutions.wistia.com/projects/r4bjpdzb31>

*Beyond Invert & Multiply* (forthcoming)

# Get to the Whole!

View video:

“Three-fifths plus four-fifths: Yuli’s strategy”

<https://mathsolutions.wistia.com/projects/r4bjpdzb31>

*Beyond Invert & Multiply* (forthcoming)

# Get to the Whole!

$$\frac{3}{8} + \frac{7}{8}$$

$$\frac{5}{6} + \frac{5}{12}$$

$$\frac{13}{9} - \frac{8}{9}$$

# Student work

Handwritten student work showing the addition of two fractions:

$$\frac{3}{8} + \frac{7}{8}$$

---

$$\frac{10}{8}$$

---

$$1 + \frac{2}{8} = 1\frac{2}{8}$$

# Student work

Handwritten student work showing the addition of two fractions:

$$3 \frac{4}{6} + \frac{3}{6} = 1 \frac{1}{6}$$

The student has drawn a diagram below the equation to illustrate the addition. It shows two fractions,  $\frac{4}{6}$  and  $\frac{3}{6}$ , with a large bracket underneath them. Below the bracket, the sum is written as  $1 + \frac{1}{6}$ .

# Student work

Handwritten student work showing two steps of adding fractions:

$$1) \frac{5}{9} + \frac{8}{9} = 1 \frac{4}{9}$$

The student has written a caret (^) under the 5 in the first fraction, indicating a regrouping step.

$$\frac{4}{9} + \frac{1}{9} + \frac{8}{9} = \frac{4}{9} + 1 = 1 \frac{4}{9}$$

The final result is underlined.

# Multiplication Patterns

Students consider patterns of products in problems with factors that decrease in value.

# Multiplication Patterns

$$6 \times 8 = 48$$

$$6 \times 4 = 24$$

$$6 \times 2 = 12$$

$$6 \times 1 = 6$$

$$6 \times \underline{\quad} = \underline{\quad}$$

# Multiplication Patterns

$$6 \times 8 = 48$$

$$6 \times 4 = 24$$

$$6 \times 2 = 12$$

$$6 \times 1 = 6$$

$$6 \times \frac{1}{2} = 3$$

# Tell Me All You Can

Before coming up with an exact answer, consider what you know about the answer as a means of getting a sense of the “neighborhood” of the answer.

# Tell Me All You Can

- The answer will be less than \_\_\_\_\_ because \_\_\_\_\_.
- The answer will be greater than \_\_\_\_\_ because \_\_\_\_\_.
- The answer will be between \_\_\_\_\_ and \_\_\_\_\_ because \_\_\_\_\_.

from Bresser and Holzman (2006)

# Tell Me All You Can

$$6 \times 2\frac{1}{2}$$

# Tell Me All You Can

$$4\frac{1}{2} \times 5$$

# Grade 5: Number and Operations - Fractions

Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

- *Implications for multiplication/division*

Is  $60 \div 2$  the same as  $60 \div \frac{1}{2}$  ?

What strategies will students have to answer this question after engaging in *How Long? How Far?*

# How Long? How Far?

Dividing a whole number by a fraction

Dividing a fraction by a whole number

# Reasoning about $1 \div \frac{1}{4}$

- How many  $\frac{1}{4}$ s are in 1?

# How Long? How Far? Part 1

View video: “How many one-fourths are in one?”

<https://mathsolutions.wistia.com/projects/r4bjpdzb31>

*Beyond Invert & Multiply* (forthcoming)

# How Long? How Far? Part 1

View video: “How many one-thirds are in two?”

<https://mathsolutions.wistia.com/projects/r4bjpdzb31>

*Beyond Invert & Multiply* (forthcoming)

# Reasoning about $1 \div \frac{1}{6}$

Q)  $1 \div \frac{1}{6} = 6$   
6 because ~~the red rod~~  
6 of the red rod fit  
perfectly in 1.

# Reasoning about $2 \div \frac{1}{6}$

1.)  $2 \div \frac{1}{6}$  -

how many  $\frac{1}{6}$  are in 2?

# Reasoning about $10 \div \frac{1}{3}$

C.)  $10 \div \frac{1}{3} = 30$

How many  $\frac{1}{3}$ s are in 10?  
I multiplied the denominator  
and the problem got me 30.

# Reasoning about $6 \div \frac{3}{4}$

d.  $6 \div \frac{3}{4} = ?$

3/4, 1 1/4, 2 1/4, 3 3/4, 4 2/4, 5 1/4, 6

1 1 2 3 4 5 6 7 8

goes into  
6 8 times

Ship counted to 6 wholes  
and it took 8 times

Is  $60 \div 2$  the same as  $60 \div \frac{1}{2}$  ?

# How Long? How Far? Part 2

## Beach Clean-Up (2 people)

Distance	Each person cleans
8 miles	4 miles
4 miles	2 miles
2 miles	1 mile
1 mile	$\frac{1}{2}$ mile
$\frac{1}{2}$ mile	?

# How Long? How Far? Part 2

$$\frac{1}{2} \div 3$$

$$\frac{1}{6} \div 2$$

$$\frac{3}{4} \div 3$$

# Number and Operations - Fractions

3.NF: Develop understanding of fractions as numbers.

4.NF: Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.

5.NF: Use equivalent fractions as a strategy to add and subtract fractions.

5.NF: Apply and extend previous understandings of multiplication and division to multiply and divide fractions.
