

Acknowledgments

I first and foremost acknowledge the many students who inspire me every day with their brilliance. I wish all students could see themselves as I see them—full of limitless potential! Because of them, I am continually on the lookout for ways to make their hours in school more rewarding, engaging, and enjoyable. They push me to be a better teacher and to think differently about teaching mathematics. The ideas in *Math Workshop* emerged because of them. So, really, this book is a product of each of my students. I'll never forget that or any of them.

I also couldn't have written this book without the influence of the amazing administrators and teachers I have met over the years. I feel privileged to work with dedicated and talented colleagues, and I've learned so much from all of you. The world is a better place because of your passion, hard work, determination, and love of children. Special acknowledgments to Matt Wight, Debbie Lane, and Maureen Boland—you challenged me and saw things in me that I didn't realize existed. Your leadership and your willingness to support my growth allowed me to think outside the box. And a special shout-out to the teachers at Rolling Valley Elementary—Emily Griswold, Breanna Wallace Tucker, Shannon Robinson, Ashleigh Long, Fiona McGonigal, Merrie Joy Hrabak, and Chrissy Callaway—you enthusiastically and openly shared your classrooms with me for the purpose of *Math Workshop*.

I couldn't have authored *Math Workshop* without the brainpower of my friends and informal editors who read many of my drafts and offered feedback. Erica Riley and Casey Reeves, this book started before I even knew you, but now I can't imagine its existence without you.

The people at Math Solutions are my superheroes! Patty Clark, your kind words and encouragement to present *Math Workshop* to others has meant the world to me. Mary Mitchell, I don't know how you put up with me—you saw the good in my drafts and helped make the content worth reading. From responding to my late-night texts to answering my panicked emails, you never flinched. You were always the calm in my stormy chapters. Denise Botelho, you made magic happen! Your vision for making my marked-up manuscript look like a work of art, your patience with me as I navigated the publishing world, and your responsiveness to my requests for help are so appreciated. To my editor, Jamie Cross, your smile and positivity have been appreciated from the beginning. You told me to believe that this book would

happen, and because those words came from you, I believed. I always knew that my work would be in good hands with your expertise and vision. The four of you believed in my message and provided the encouragement, flexibility, and support I needed over the last several years while my messy pages and random thoughts were crafted into a cohesive book. I also want to thank Perry Pickert and his team at Friday's Films for filming the beauty that I see when I observe students doing math workshop. You captured the excitement and wonder as well as the mathematical reasoning that happens in classrooms.

Most of all, I thank my family. My wonderful children, Mason, Claire, and Sophia—you saw me at my laptop way more hours than I had hoped. I'll never forget you saying, "You are such a hard worker, Mommy!" Those words got me through the toughest chapters to write, though the "mom guilt" was heavy. I know having an educator for a mother isn't always easy. I'm looking for the learning opportunity in everything and constantly trying to do math with you (because I find such joy in seeing the amazing mathematician in each of you). While I probably won't stop asking you about your thinking and encouraging you to do number talks at our dining room table, with this book finished, I am excited about more hours to hike, bike, picnic, and read with you. And to my husband, Andrew—thank you for believing that I could finish this beast! You never doubted me for a second. I appreciate more than you'll ever know the times you took the kids out to play to give me just a few more hours to write. I knew I married a man who would easily assume an equal share of household and childcare duties. But, in reality, you have taken on the lion's share of these while I pursued this book and my studies. I never could have finished *Math Workshop* without you. Thank you.
