Noticing the Numbers

Students Using Computation Strategies Based on Reasoning

Math Solutions[®]
FOUNDED BY MARILYN BURNS

What do you notice? What do you wonder?

Essential Questions

- What does it mean to be procedurally fluent?
- How do we move students toward making computational decisions based on number sense and reasoning?

When you hear the word...

efficiently

When you hear the word...

fluently

Fluency

“Being fluent means that students are able to choose flexibly among methods and strategies to solve contextual and mathematical problems, they understand and are able to explain their approaches, and they are able to produce accurate answers efficiently.”

Principles to Actions, National Council of Teachers of Mathematics

Following a Procedure

$$\begin{array}{r} 1 \\ 75 \\ \times 13 \\ \hline 225 \\ +850 \\ \hline 1075 \end{array}$$

Fluency

“Being fluent means that students are able to choose flexibly among methods and strategies to solve contextual and mathematical problems, they understand and are able to explain their approaches, and they are able to produce accurate answers efficiently.”

Principles to Actions, National Council of Teachers of Mathematics

Building Fluency

Fluency builds from

- Initial exploration and discussion of number concepts
- To using informal reasoning strategies based on meanings and properties of the operations
- Through intentional practice that leads to the use of general methods as tools in solving problems

Building Fluency

Fluency builds from

- **Initial exploration and discussion of number concepts**
- To using informal reasoning strategies based on meanings and properties of the operations
- Through intentional practice that leads to the use of general methods as tools in solving problems

Tell Me All You Can

Tell Me All You Can

$$48 \times 14$$

Tell Me All You Can

$$15 \times 38$$

- The answer is going to be **about** ____ because _____.
- The answer is going to be **between** ____ and ____ because _____.
- The answer is going to be **less than** ____ because _____.

Reflect

- How does getting students to notice the numbers in Tell Me All You Can support fluency?
- What numbers and operations would you use with your own students?

Building Fluency

Fluency builds from

- Initial exploration and discussion of number concepts
- **To using informal reasoning strategies based on meanings and properties of the operations**
- Through intentional practice that leads to the use of general methods as tools in solving problems

Solve using Mental Math

$$99 + 17$$

Dina

Manuel

Alberto

Amir

Reflect

- How does having students compare strategies support fluency?
- How would you implement this practice with your students?

Building Fluency

Fluency builds from

- Initial exploration and discussion of number concepts
- To using informal reasoning strategies based on meanings and properties of the operations
- **Through intentional practice that leads to the use of general methods as tools in solving problems**

Solidifying Knowledge

“In moving to fluency, students also need opportunities to rehearse or practice strategies and procedures to solidify their knowledge.”

Principles to Actions, National Council of Teachers of Mathematics

Decimal Explorations

- Choose any 5 counting numbers and multiply each by $.9$ and record results
What do you notice?
- Multiply the same 5 numbers by 1.5
What do you notice?
- Multiply the numbers by 1.1
What do you notice?
- Multiply the numbers by decimal numbers of your choice
What do you notice?

Transforming Practice Problems

Traditional Practice

Find the Product.

$$\begin{array}{r} 28 \\ \times 3 \\ \hline \end{array}$$

$$\begin{array}{r} 56 \\ \times 6 \\ \hline \end{array}$$

$$\begin{array}{r} 71 \\ \times 5 \\ \hline \end{array}$$

$$\begin{array}{r} 69 \\ \times 8 \\ \hline \end{array}$$

$$\begin{array}{r} 36 \\ \times 4 \\ \hline \end{array}$$

Transformed Practice

Solve the problems that would result in an answer greater than 300.

$$\begin{array}{r} 28 \\ \times 3 \\ \hline \end{array}$$

$$\begin{array}{r} 56 \\ \times 6 \\ \hline \end{array}$$

$$\begin{array}{r} 71 \\ \times 5 \\ \hline \end{array}$$

$$\begin{array}{r} 69 \\ \times 8 \\ \hline \end{array}$$

$$\begin{array}{r} 36 \\ \times 4 \\ \hline \end{array}$$

Principles to Actions

Build procedural fluency from conceptual understanding
Teacher and student actions

What are *teachers* doing?

What are *students* doing?

Intentional practice that leads to the use of general methods as tools in solving problems

- Thinking about our own methods and how they connect to methods used by others
- Generalizability

Generalizability

Which student is using a method that would work for any two whole numbers?

Student A	Student B	Student C
$\begin{array}{r} 35 \\ \times 25 \\ \hline 125 \\ +75 \\ \hline 875 \end{array}$	$\begin{array}{r} 35 \\ \times 25 \\ \hline 175 \\ +700 \\ \hline 875 \end{array}$	$\begin{array}{r} 35 \\ \times 25 \\ \hline 25 \\ 150 \\ 100 \\ +600 \\ \hline 875 \end{array}$

Using Visual Models

$$30 \quad + \quad 5$$

$$\begin{array}{r} 35 \\ \times 25 \\ \hline 175 \\ 700 \\ \hline 875 \end{array}$$

Reflect

- How do you currently provide practice for students? What new ideas do you have for providing practice?

Principles to Actions

Build procedural fluency from conceptual understanding
Teacher and student actions

What are *teachers* doing?

What are *students* doing?

Essential Questions

- What does it mean to be procedurally fluent?
- How do we move students toward making computational decisions based on number sense and reasoning?

Thank You!
